Owls Hunt at Night

Name: _____ Date: _____

Owls are birds that hunt at night. In the dark, they look for mice, bugs and other small animals.

Owls have very big eyes that help them see when there is little light. An owl cannot move its eyes, so it turns its whole head instead. It can turn its head a long way around!

Owls also have great hearing. Their soft feathers let them fly with almost no sound. Shh! Here comes an owl.

1 WHEN? **When do owls hunt?**

at night at lunch in the morning
